

SN74LS155N

■ Product Introduction

The SN74LS155N is a Dual 2-Line to 4-Line Decoders/Demultiplexers.circuit features dual 1-line-to-4-line demultiplexer with individual strobes and common binary-address input. When both sections are enabled by the strobes, the common binary-address inputs sequentially select and route associated input data to the appropriate output of each section. The individual strobes permit activating or inhibiting each of the 4-bit sections as desired. Data applied to input 1C is inverted through its outputs. The inverter following the 1C data input permits use as a 3-to-8-line decoder or 1-to-8-line demultiplexer without external gating.

1、Test Circuit

Notes:

- A. Input signal pulse: $f=1\text{MHz}$, $D=50\%$, $t_{\text{LH}}=t_{\text{HL}}$ is less than 20ns. except for special regulations.
- B. The CL capacitor is an external patch capacitor (0603), which is connected to the output pin and the capacitor is near the chip GND.
